

Urban August™ is a leader in locking & storage solutions.

Urban August was first created in order to address a common issue amongst many developmentally disabled individuals: over-eating. This affected the founder on a personal level. "My younger brother is developmentally disabled, and when my parents informed me of his unhealthy habit of consuming large quantities of junk food late at night, I decided to see if I could help."

The solution was simple: a childproof lock to secure the fridge & cabinets outside of meal times. This idea paid off, with many people using our locks for a variety of reasons: at schools, for teens, for older adults. We then began producing and selling locks around the world. Through this experience Urban August has been able to connect to a community that shares similar home safety needs. After hearing the needs and feedback from thousands of members of that community, Urban August has once again answered their calls with a brand new product, The Lock Box.

*We are a small family business working to make a difference. We listen to our customers and strive for their complete satisfaction. A product review would help us out tremendously.*

*Thank you!  
Marc, Founder of Urban August*

# Lock Box by Urban August™

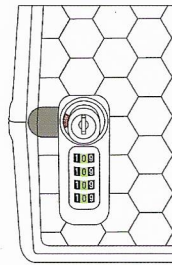

**Warning:** The Urban August Lock Box is not a toy, nor is it completely break-proof. When not in use, the lock box needs to be kept away from children. Although the Urban August™ lock box is intended as a first line of defense to keeping certain items safe, it is not to be considered as completely secure. Although the box may provide a level of security & resistance, it is not designed to store or protect against expensive valuables. Use responsibly. Please exercise caution when using the lock box to restrict access to certain consumables & medicines. Note that the Urban August Lock box is not dishwasher safe, and should be cleaned before use with food.

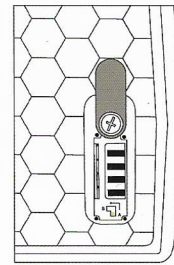

To help secure your home, office or anywhere that needs an extra layer of security. The Lock Box by Urban August was designed to add that extra layer. For home, office, hospital, school, the uses are endless. Made out of high-grade polycarbonate, and designed by top mechanical engineers in Milan, Italy, our Lock Box is durable and high-quality. Our patent-pending design is indestructible under normal usage.

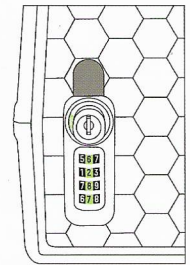

## How to change the combination:

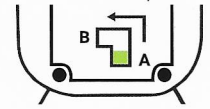

1) Make sure the lock is set to its default combination-0-0-0-0, or whatever combination you had previously used. Turn knob and open the box door.

2) Looking at the backside of the lock, on the bottom end, you will notice a small lever with the letters 'A' and 'B.'

4) Change the combination.  
5) Move the lever back to its original position, from 'B' to 'A.' Your combination is now set.

3) Move the small lever from its position at 'A' to position at 'B.'

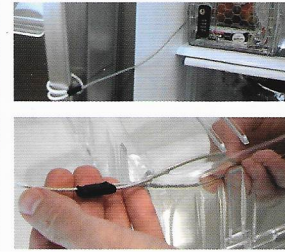

## How to use the cable:

To create a more secure experience, we've included a steel tether & a lock. There are two ways to use this:

Tether one end to something stationary.

Slip the other end into one of four portholes on the backside. Secure it with the brass padlock.

Another way to secure the box is to secure both ends of the cable through two of the four portholes on the backside. The loop can be placed around something stationary.
